

Finite State M/c

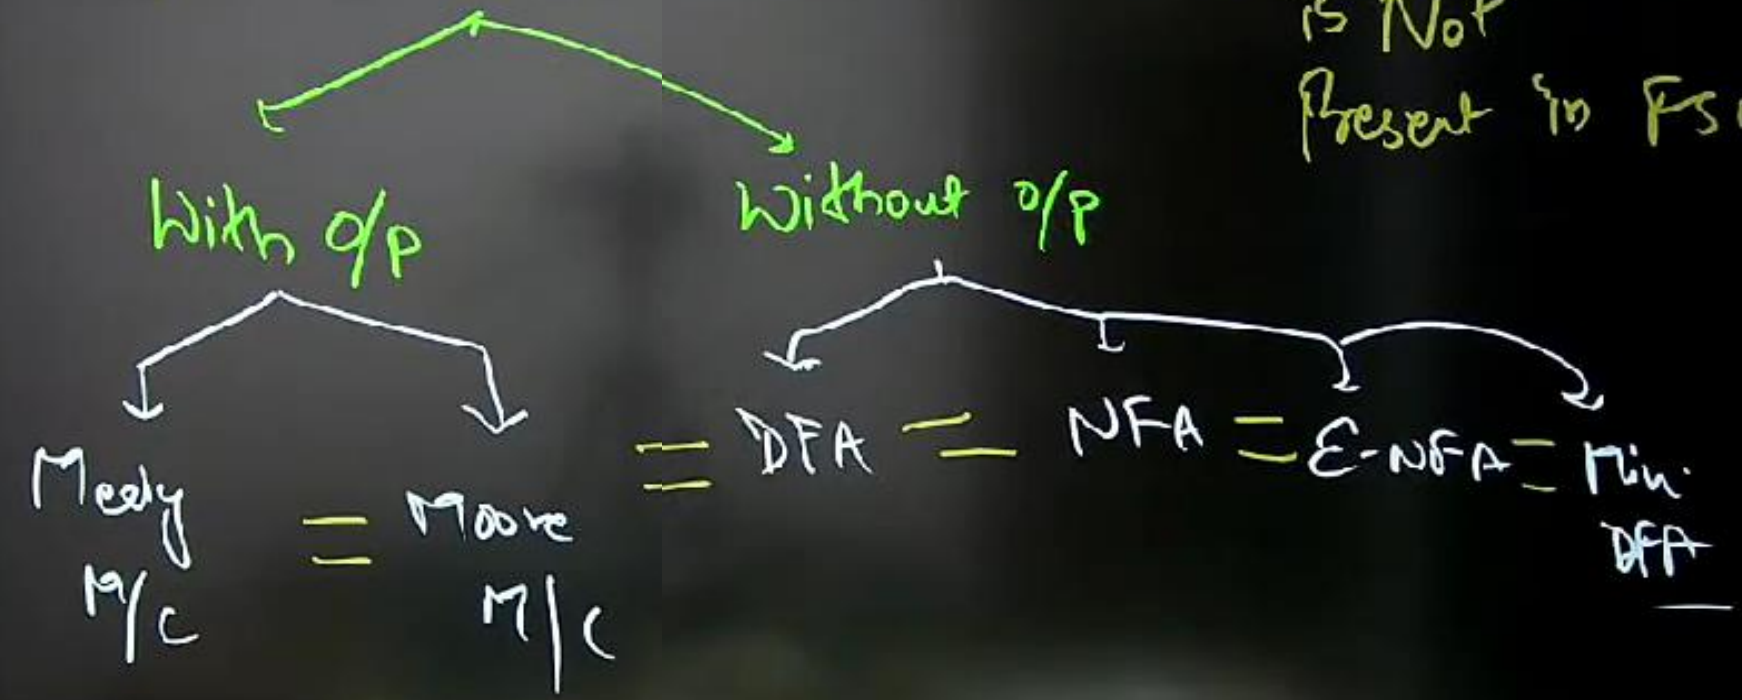

COUNT* →

(4*) Memory Element is Not Present in FSM

Power
LP

FSM $\rightarrow \{q_0, \Sigma, q_F/F, Q, \delta\}$

Initial State

alphabet

Final state

Set of all states

Transition Func.

DFA

δ : Deterministic

$\delta: Q \times \Sigma \rightarrow Q$

NFA

δ : Non-Deterministic

2^Q

FINAL STATE

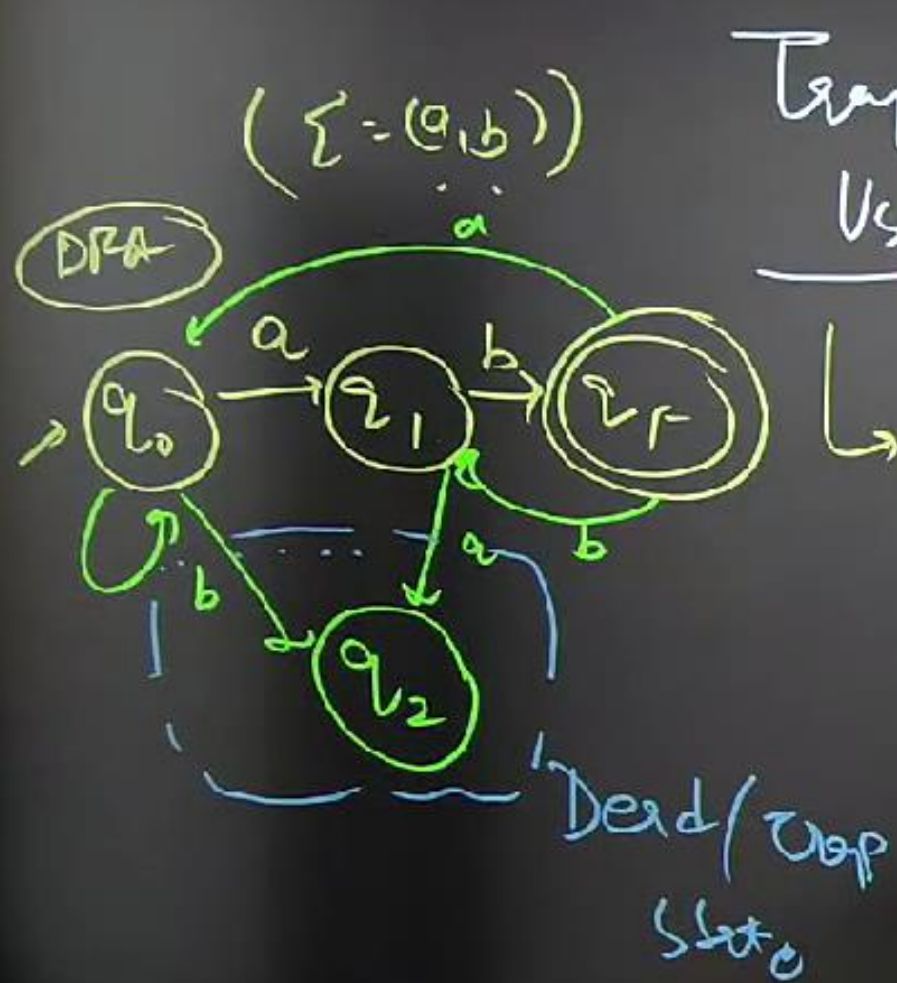

→ $0 \leq |F| \leq 1$

INITIAL STATE

→ There can only
be one initial
state

Trap State /
Useless State / Dead State

State which will
Never lead you to
Final state

{ Jisme
Kabhi bhi koi
Outgoing
Edge Na Hae! }

String Accepted

* Tricks to Construct any Automata *

Complete
+ then
min-string
 \rightarrow
 $\rightarrow L \rightarrow (a+b)^*$
 \downarrow
 (2) 0

1) Move must always be precise \rightarrow Min

2) If You have to Remember something
then only change the state.

Otherwise
just make a loop!!

$$\Sigma = a, b$$

$$\omega_1 = \underline{a a b}$$

$$\omega_2 = a^* b$$

$\rightarrow \epsilon, 1, 2, 3, \dots$

Ex Starting with abb (w)

$$|w| \Rightarrow 3$$

$$|Q| = 5$$

RE

$\underline{a} \underline{b} \underline{b} \underline{a^*} \underline{b^*}$
 $\swarrow \quad \downarrow \quad \searrow$
 $a_1 b a^* \quad a b b b^* \quad a b b a^* b^*$

Note:

$$|W| = n$$

DFA

$$|\theta|_{\text{max}} = n+2 \quad \times$$

$$|\theta|_{\text{min}} = n+2 \quad \checkmark$$

How

All strings having
Substring is abb will be accepted.
